

Acknowledgments

This project reflects an ongoing partnership between the Billerica School System and the Harvard Division on Addictions. Partnership requires a special kind of mutual support. The Billerica School System is remarkable for the talent, depth, and character of its administration and classroom teachers. We extend special thanks to the School Committee of Billerica for their vision and willingness to advance the interests of American education. Dr. Robert Calabrese, Superintendent of School, Dr. John Katsoulis, Assistant Superintendent, and Joseph LoDuca, Chair of the Science Department, represent what is best about public education in America. Their support, patience and partnership has been remarkable. Dr. Katsoulis' vision and energy, and Mr. LoDuca's insight and wit sustained every aspect of this project.

A guiding force throughout this work has been the Billerica Science Advisory Panel. This group of educators, parents and students came together to guide the needs assessment research and then the development of this curriculum. We extend our appreciation to Dr. Leslie Bernal, Margaret Cowell, Helen Devlin, Kathy Fleurant, Shirley Granfield, Richard Kogan, Peter Maguire, Pat Minishak, Pam Newfell, Ray Shepard, Melissa Thomas, Ed Walsh for their contributions to the work of the Science Advisory Panel, our Addiction Science Summer Internship Program, and this Addiction Science Curriculum.

Harvard University has many resources. The most important resource is the faculty. Colleagues at Harvard helped to shape this project as well. We appreciate their time, effort and support. They listened when we needed it and this helped to sustain our work. Thanks to Drs. Gerald Holton, Scott Lukas, Eric Mazur, Bertha Madras, and David Potter.

During our needs assessment phase of this project, we received important support from the Lowell Public School System. We appreciate the efforts of Harry Kouloheras who facilitated our data collection in the Lowell schools. In addition to our associates in Lowell, many other special people contributed in a variety of different ways to the research aspect of this project. We extend thanks to Barry Connors, Janet Considine, Rosemary Fennel, Thomas Flynn, Pat Hines, Ray Homola, Ashley Howard, Marlene Johnston, Terry Kadir, Armen Kludjian, Robert McLaughlin, James McMann, Dr. X. Michaels, Mary Jane Mullen, Guy Parsons, Gennaro Pasquale, Jill Oppenheim, Rob Oppenheim, Jack Picanso, George Semekis, David Shaffer, Jackie Travis, Gary Varella, Jennifer Walsh, Bill Wellington, and Tori Wellington for their help during the complex and demanding process of assessing middle school students' alcohol and drug, science, and mathematics educational needs.

We are especially grateful to the Billerica Middle School Science Advisory Teacher Team for their hard work and thoughtful attention to the curriculum throughout its development. Thanks are extended to Peggy Blair, William Blair, Richard Drake, Patti Hanlon, Ray Homola, Ann Mahon, Angelo Mara, Sue Mara, Jim McMahon, Jim McNamara, Gennaro Pasquale and Charlene Perry.

The Student/Teacher Addiction Science Summer Interns were instrumental in providing critical input to the curriculum during its latter stages of development. Thanks are extended to William Blair, Vincent DeFeo, Jeb Ensslen, Judith Foley, Thomas Murphy, Denise Blaisdell, Mandy Danehy, Derek DiRocco, Michelle Farrell, Mary Foley, Jami Foti, Brian Ly, Steven McCarthy, and Kerri-Ann O'Donnell.

Special colleagues deserve recognition for going beyond what was required and dedicating themselves to this project. These individuals gave more than what seemed possible to the editorial and administrative aspects of this project. We extend a very special thanks and appreciation to the essential contributions of Leslie DiMello, Dr. Scott Lukas, Emily McNamara, Greg O'Donohue, Ann Seymour, Christine Thurmond and Coco Wellington. This talented group provided tireless,

diligent, and most of all, excellent editorial and creative attention to the development of this curriculum.

Matthew Hall and Joni Vander Bilt also were diligent, creative and dedicated to teaching young people number sense and critical thinking skills. Their work transformed the everyday tasks of learning how numbers work into relevant problems that tickle the fancy and stimulate the intellect. Matthew and Joni make my work an opportunity and a joy. For them, I extend very special thanks for coming into my life and enriching the experience of children.

In addition to the many people who contributed to this enormous undertaking, one woman was the engine that drove this project to completion. I want to extend a very special thanks to Carolyn Howard, a remarkably creative, dedicated and energetic woman, who everyday provided the energy and creativity to see this project through. Without her diligence, this project could not have been completed. Carolyn dedicated herself to this project with such eagerness, energy and passion, that everyone involved was touched by her magic. Her efforts transformed traditional science and drug abuse education. Carolyn's work is certain to enchant middle school children who experience this curriculum. Her devotion to children is carving a new and bold path in the history of science education; for this, everyone owes her a debt of gratitude.

A grant (#1-R25-DA09288-01) from the National Institute on Drug Abuse stimulated and sustained this project. Additional funding for this work was provided by Tom and Janet Brosig, the Massachusetts Council on Compulsive Gambling and Scientific Games, Inc. We extend a very special thank you to these organizations who joined us in the vision of a better future for young people, took a special interest in American science and mathematics education, and endowed this project.
